NOT CAPP CHI is a cDNA library containing the following
tissue(8): Chondrosarcoma Grade II. The library was
constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT7T3-Pac vector. The oligonuclectide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property contains and the property c

/note="Organ: Left Public Bone; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: ECOR I; Site 2: Not I; NCI CGAP_ED1 is a normalized CDNA library containing the following tissue(s): Chondrosarcoma cell line CS5. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GCTCAAGGCT.

NOI CGAP FH0 is a cDNA library containing the following tissue(s): Human Grade according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer scheduling a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, disested with Not I, and cloned directionally into pT73-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AGAARCGGC. The cell line was provided by Dr James Martin from University of Iow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1073

This sequence is a fragment of the human RICK (RIP-like interacting CLARP kinase) protein of the invention. RICK acts as a positive regulator of apoptosis, protein of the invention. RICK acts as a positive regulator of apoptosis, protein and activators, and methods and compositions signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions identified. ARC, RICK, and the CIDE family of activators (CIDE-A, USE-I). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Overexpression of ARC and CLARP can be used in drug screening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overexpression of ARC in an in vitro cell system can be used to identify inhibitors of the enzymatic activity of caspase-8 concanion of ARC-like inhibitory compounds may be useful for gene therapy treatment of disease with increased cell death in muscle tissue and cardiac disorders. Therapeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia, ischaemic injury, and toxin-induced liver disease. AntiRICK antibobies can be used as reagents for the preparation or affinity chromatography media, and for diagnostically measuring RICK levels. A specific inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and ADD appears to che essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis factors are potential drug candidates. Note: This sequence was considered using information given in the specification. Claim 6; Page; 93pp; English.

Compositions for identifying apoptosis signaling pathway inhibitors useful for treating diseases.

Claim 6; Page; 93pp; English.

kinase) protein of the invention. RICK acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during CD95 signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions identified: ARC, RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Complexes containing RICK and CLARP can be used in drug screening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overexpression of ARC in an in vitro cell system can be used to the continuous inhibitors of the enzymatic activity of caspase-8.

The continuous compositions of the enzymatic activity of caspase-8.

The charty treatment of disease with increased cell death in muscle tissue therapy treatment of disease with increased cell death in muscle tissue. sequence is a fragment of the human RICK (RIP-like interacting CLARP) or protein of the invention RICK acts as a positive regulator of Therapeutic compositions of CIDEs can be used to , neurodegenerative disorders; aplastic anaemia, rreat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia ischaemic injury, and toxin-induced liver disease. AntiRICK antibodies cardiac disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               871
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 media, and for diagnostically measuring RICK levels. A specific inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to be essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis factors are potential drug candidates. Note: This sequence was created using information given in the specification

protein of the invention. The RICK protein acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during CD95 signalling. The invention provides methods for identifying apoptosis signalling apoptosis inventions and activators, and methods and compositions for screening compositions dentified. RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK, and the CIDE family of assays for agents, useful in the diagnosis, prognosis or treatment of assays for agents, useful in the diagnosis, prognosis or treatment of assays for agents, useful in the diagnosis, prognosis or treatment of assays complexes containing RICK and CLARP can be used in drug screening assays to identify inhibitor molecules blocking CD95-mediated of apoptosis. Overexpression of RRC in an in vitro cell system can be used to identify inhibitors compounds may be useful for gene Identify inhibitors compounds may be useful for gene Identify inhibitors with increased cell death in muscle tissue therapy treatment of disease with increased cell death in muscle tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and cardiac disorders. Therapeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia, ischaemic injury, and toxin-induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography media, and for diagnostically measuring RICK levels. A specific inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to be essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis are potential drug candidates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 391
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               332 CAGTTACAGAGTGTTTCAAGTGCCATTCACCTATGTGACAAGAAGAAAAATGGAATTATCT

New B1 protein regulates cell death and cell survival pathways -derivatives, DNA and antibodies, also regulate intracellular inflammation; for treating AIDS, cancer.
                                                                                                                                                                            This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as A1DS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             493 ThrThrAspIleGlnGlyGluGluPheAlaLysVallleValGlnLysLeuLysAspAsn

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              631
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ProCysSer8erAlallelleAsnProLeuSerThrAlaGlyAsnSerGluArgLeuGln 432
                                                                                                                                                                                                                                                                                                                                                  AAY68769-95 and AAY68797-99 represent human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not gluon in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP expression/activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              391
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               451

Primers for Synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Primers useful for synthesizing full length cDNA clones and their use

```
The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its expression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antisense oligonucleotide that targets regions of a nucleic acid encoding human receptor interacting protein (RIP)2, for treating diseases associated with RIP2 expression.
                                                                                                                                                                                                GACTATGAACTTGTTAGTACCAAGGCTACAAGGACCTCAAAAGTCAGACAATTACTAGAC 871

                                                                                                                                                                                                                                                à
                                                                                                                                                                                                                                                                            a
                                                                                                                                                                                                                                                                                                                                                                                                                         for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cellular kinases Ruck, RIP, NGK-Interacting kinase, MKK3 and SRRY-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present amino acid sequence represents the human cellular kinase RICK protein of the invention, as described above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       372

AAC77607 to AAC7848 encode the human cancer associated proteins given in AAG43398 to AAB4239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antialergic; antiacthritic; antinflammatory; antithyroid; antialergic; antibacterial; antiviral; certainfolgical; neuroprotective; cardiant; thrombolytic; coagulant; coorropic; vasotropic; antipsoriatic and antianglogenic. The polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polynucleotides, polypeptides and diagnosing pathological conditions. Co inhibiting the proliferation, differentiation or mobilisation of cimmune cells, to treat disorders immune disorders by activating cor inhibiting the proliferation, differentiation or mobilisation of ciscular disorders, allergic reactions, graft versus host disease and organ calection, modulate haemostatic or thrombolytic activity, modulate conference inflammation, cancers, cardiovascular disorders, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. This invention describes the isolation of novel human caspase recruitment domain, CARD-1 and CARD-4 polynucleotides and proteins and a partial article domain, CARD-4 protein and genes and proteins of the invention are involved in the regulation of caspase activation. The caspase activation are involved in the regulation of caspase activation. The caspase activation are bused in screening assays, detection assays, predictive methodies can be used in screening assays, detection assays, predictive methodies may be used to diagnose and treat patients which are suffering methodis may be used to diagnose and treat patients which are suffering death, abnormal activity of the TMF receptor complex, abnormal activity of the TMF receptor complex, abnormal activity of the TMF receptor complex, or abnormal activity of a caspase. Complexes that may be treated include cancer (particularly follicular lymphoma, carcinomas associated with muttations in p53 and hormone-capped the caspase that may be treated include cancer (particularly follicular lymphoma, carcinomas associated with muttations in p53 and hormone-capped particularly associated with mutuations in p53 and hormone-capped particularly follicular lymphoma, carcinomas associated with mutuations in p53 and hormone-capped particularly follicular lymphoma, spinal muscular dystrophy, cerebellar degeneration, ansemia, myelodysplastic syndrome, myocardial infarction, and stroke. CARD-3 protein interacts with other cellular proteins, and so can be used for regulation of cellular proliferation and differentiation and cell correctly and capped compounds which modulate their activity. The CARD-4 gene can express a compounds which modulate that a activity. The CARD-4 and CARD-4 sor two CARD-4 splice variants, CARD-4 and CARD-4. and secured correctly represents the human CARD-3 protein described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CTGAACATACCTGTAAATCATGGTCCACAAGAGGAATCATGTGGGATCCTCTCAGCTCCAT 451

The present sequence is that of human caspase recruitment domain 3 (CARD-3), an intracellular protein predicted to be involved in regulating caspase activation. The sequence is predicted from an isolated CDNA clone (see AAF30001). Methods of diagnosing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the Fas/APO-1 receptor complex, abnormal activity of a caspase involve administering a compound that modulates the activity of a caspase involve administering a compound that modulates the expression or activity of ASRD-3, CARD-5 or CARD-6 e.g. using capter therapy methods. Such disorders include cancer, viral infection, cautoimmune disorders, neurological disorders, viral infection, contominated disorders. CARD-3, -4, -5 and -6 or proteins can be used to regulate cell proliferation, cell survival and cell growth. They can also be used to screen drugs or compounds that. Cell growth. They can also be used to screen drugs or compounds that. Cell modulate their activity or expression and to treat disorders associated with insufficient or excessive production of CARD-3, -4, -5 or -6 or -6 protein, or production of an aberrant protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 492
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 931
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               512

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to identifying (MI) a compound which modulates a human or murine caspase recruitment domain (CARD)-4L (long form)

Co bypeptide with a by contacting the polypeptide with a test compound and determining the effect of the test compound on the activity of the collypeptide to identify a compound which binds to the IRR (lough may be adapted for identifying a compound which binds to the IRR (loucine rich repeat) domain of CARD-4. Also included is a method of identifying a candidate compound for modulating LPS, (loopolysaccharide).

Comediated activation of nuclear factor-kappa B (NF-kB), by providing a cell expressing a polypeptide comprising the LPR domain of CARD-4 and harbouring LPS, exposing the cell to a test compound and measuring NF-kB activation polypeptide in the presence of the test compound indicates that the test compound is a candidate compound for modulating LPS-mediated activation of NF-kB. Modulators identified by (MI) are useful for treating a disorder such as cancer, viral compound infections, autoimmune disorders such as cancer, viral infections, autoimmune disorders e.g. systemic lupus erythematosus, immune-mediated glomerulosephatis and arthritis, immune disorders is munitalle sclerosis, Hashimoto's thyroiditis, atopic conditions such as asthma, allergies, insulin-dependent diabetes, bacterial infections, including tuberculosis, and lepromatous leprosy, disorders of cell signalling and tuberculosis, and lepromatous leprosy, disorders of cell signalling and

The invention relates to novel isolated Caspase Recruitment Domain (CARD) polypeptides, CARD-41 and CARD-45. The CARD proteins of the invention may polypeptides, CARD-41 and CARD-45. The CARD proteins of the invention may be used to treat disorders associated with decreased CARD expression by supplementing the patient's own production of CARD. Disorders associated with the expression and activity of CARD include cancers (particularly follicular lymphomas, carcinomas associated with mutations in p53, and covarian cancer, autoimmune disorders (such as systemic lupus erythematosus, immune-mediated glomerulonephritis), viral infections, eurological diseases by herpes viruses, parkinson's disease, amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal muscular atrophy, and various forms of careballar degeneration), anaemia associated with chronic disease, aplastic anaemia, chronic neutropenia, and the myelodysplastic syndromes. This sequence represents a human CARD protein relating to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cerebroprotective; antiparkinsonian; antisolerotic; ophthalmological; nootropic; antianaemic; Caspase Recruitment Domain; CARD; CARD-4L; p53; cancer; CARD-4S; follicular lymphoma; carctinoma; autoimmune disorder; hormone-dependent tumour; breast cancer; prostate cancer; systemic lupus; herpes virus; poxvirus; adenovirus; neurological disease; anaemia; neutropenia; myelodysplastic syndrome; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated Caspase Recruitment Domain (CARD) polypeptides (CARD-4L and CARD-4S) useful for diagnosing and treating e.g. Parkinson's and Alzheimer's disease, cancers and viral infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CTGAACATACCTGTAAATCATGGTCCACAAGAGGAATCATGTGGATCCTCTCAGCTCCAT

                                                                                                                                         The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-47, human CARD-42 or murine CARD-4L (all splice variants of CARD-4) comprising the collaboration of the comprising the polypeptide. Also included is an isolated fusion protein, comprising the collaboration polypeptide is useful in screening assays, collaboration polypeptide. The CARD polypeptide is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, controling clinical trials and pharmacogenomics), and in therapeutic and prophylactic treatments (in diseases associated with apoptotic call death comprophylactic treatments (in diseases associated with apoptotic and prophylactic treatments (in diseases associated with apoptotic and communodeficiency syndrome), neurological disease (e.g. systemic lupus erythematosus and immunodeficiency syndrome), neurological disease (e.g. Alzheimer's disease, parkinson's disease, amyotrophic lateral sclerosis, retinitis configuration and stroke). The CARD polypeptide is susful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD proteins. Also disclosed are CARD-3 proteins and cDNAS. The gene for human CARD-4 is located on chromosome 7. The present sequence is a human human CARD-4 is located on chromosome 7. The present sequence is a human human CARD-4 is located on chromosome 7. The present sequence is a human human CARD-4 is located on chromosome 7. The present sequence is a human care and continue of the care and continue to the care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care and care an

```
Detecting compounds which alter binding of the caspase recruitment domain (CARD) of CARD-3 polypeptide to the neurotrophin receptor p75 is useful to provide compounds for treating CARD-3 mediated disorders.
                                                                                            931
                                                                                                                                                         991

                                              This invention relates to two novel genes CARD-3 and CARD-4 (caspase recruitment domains), which are mediators of apoptosis and are useful in the identification of compounds that modulate apoptosis. Specifically, CARD-3 (also known as RIP2, RICK and CARDIAK) is known to be a mediator of p75 (a member of the tumour necrosis factor (TNF) family), and is

                                                                                                                                                                                                                                                                                                                                                                               04-DEC-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                23-MAY-2002
```

mediated by this p75 neutrophin receptor. Accordingly these genes, and the provide the switch for cell survival and cell death decisions mediated by this p75 neutrophin receptor. Accordingly these genes, and the process of the proteins encoded thereof, are linked to certain disorders associated with an increased number of cells surviving and proliferating when apoptosis is inhibited. These include cancer, autoimmune disorders e.g. systemic lupus and immune mediated glomerulomephitis, viral infections such as those caused by the herpesvirus, neurological disorders such as retinitis pigmentosa, haematologic diseases including chronic retinitis pigmentosa, haematologic diseases including chronic invention further describes a novel method for determining whether a test compound alters the binding of CARD-3 to p75, which comprises measuring the binding of a polypeptide containing the CARD domain of CARD-3 to a polypeptide comprising the death domain of p75 in the presence and passence of the test compound, and determining if binding is altered. This polypeptide is the human CARD-3 protein sequence of the invention. \$

TITLE CANTING APPLICANTIONS AND METHODS FOR IDENTIFYING APOPTOSIS
TITLE OF INVENTION: SIGNALING PATHWAY INHIBITORS AND ACTIVATORS
FILE REFERENCE: UM-03333
CURRENT APPLICATION NUNBER: US/09/069,023A
CURRENT FILING DATE: 1998-04-27
NUMBER OF SEQ ID NOS: 38
SOFTWARE: Patentin Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence (Sequence (Sequence (
